Category Name Design

Actionee HAIS

Sub Category

Subject 6-hour and 3-hour time periods

Description of Problem or Suggestion:

The PDR states that changes to command loads are allowed up to 6 hours prior to time of execution, and that ATC patch loads have a 3-hour overlap with the original load they are patching.

Periods such as this should be modifiable by the FOT as appropriate to accommodate on-orbit experience and special conditions (e.g. via something analogous to NAMELIST values).

Originator's Recommendation

Design the system to accommodate periods defined and modified by the FOT as needed without requiring software upgrades, and state them as user-defined periods rather than implying they are pre-defined hard-coded values.

HAIS Response Date 1/24/95

The statement that changes to command loads are allowed up to 6 hours prior to the time of execution is based on the Level 3 requirements. The 6 and 3 hour time periods are not restricted by the software and may be defined procedurally.
